Quiz #3 Study Guide: IST 209

Chapters 4-5
1 / 2 May 2008

Unary increment & decrement operators

while loops

Programming for loops

Differences between while, do-while, and for loops

Break & continue statements (usage and caveats)

Examples of and problems with infinite loops

Opening files for reading and writing

Purpose of Methods

Void vs. Value-returning methods

Components of the method header

Argument type compatibility

Passing by Value vs. Passing by Reference

Scope of local variables

Returning values from methods

Note: a "cheat sheet" will be provided which lists the class libraries, default classes, methods, and printf formatting character combinations which have been covered in class and which may be needed for the quiz. You should know what each of the methods is used for and any arguments passed into the methods.
