

## MGMT 362e Assignment #3

Using DHTML in your home page

Due 11 April 2003

***You must upload the files your directory on the class' webserver and e-mail the location to me at [ajaken@cba.siu.edu](mailto:ajaken@cba.siu.edu) prior to the beginning of the lab on 11 April.***

Using the homepage you developed for Assignment #2, create a DHTML web page which will include an external style sheet and a DHTML menu. For your external style sheet, you need to include a selector and declaration for each HTML element type that is included in your web page which supports style sheets (e.g. H1, H2, BODY, B, etc. but not HTML, TITLE, etc.). You will also need to incorporate a DHTML navigation system for your site and your external links. You may use one of the navigation systems from chapter 5 in DHTML & CSS or you can create your own. You will need to ensure that all of the navigation elements are displayed properly.

Make sure that when you turn in the assignment, you include all files that are used by the webpage.
