

MGMT 362e Assignment #3

Using CSS in your home page

Due 11 April 2005

You must upload the files your directory on the class' webserver and e-mail the location to me at ajaken@cba.siu.edu prior to the beginning of the lab on 11 April.

Using the homepage you developed for Assignment #2, create a web page which will include an external style sheet. For your external style sheet, you need to include a selector and declaration for each HTML element type that is included in your web page (e.g. H1, H2, BODY, B, etc. but not HTML, TITLE, etc.). You should also include and make use of 2 class definitions and include rules for all of the Anchor tag pseudo-classes. Make sure that you modify your original HTML to include the external style sheet and make use of the CSS classes you've defined.

Make sure that when you upload your assignment, you include all files that are used by the webpage.
