

MGMT 362e Project #2

Complete the business web site

Due 6 May 2005

You must upload the website to one of the teammates directories on the class' webserver and e-mail the location to me at ajaken@cba.siu.edu prior to the beginning of the lab on 6 May.

Using the teams you created for Project #1, you will complete the website which you began. The website will contain a minimum of 10 web pages. You will create a consistent look and feel for all of the web pages using the design concepts and principles which we covered in class. The teams will create a consistent navigation system used on all pages on the site. The teams will also include as one of the minimum pages a fully functional site map for the website. DHTML will be required for use in an appropriate manner depending on your site's intent & purpose. The weight of the home page will be less than 100KB and each subsequent page will be less than 60KB unless the requirements of the site demand otherwise.

It will be the team's responsibility to develop the site according to the requirements of that business of whom I will function as their liaison.

The team will receive a grade for the project and the individual team members will receive their grades based upon a variance of the project grade determined by a team evaluation form
